Calendar

AfterLogic WebMail Pro is a browser-based e-mail and collaboration front end, designed to work with your existing messaging solutions. From an administrator's perspective, the application is easy to install on your own server, easy to integrate and easy to maintain.

Works with your e-mail server

- Linux: Exim, Postfix, Courier, Dovecot, Sendmail, Qmail and many others.
- Windows: Microsoft Exchange, Windows POP3 Service, MailEnable, IceWarp, MDAemon, hMailServer, and many others.

Intuitive and easy to use

Simple yet powerful, with emphasis on speed and responsiveness. The interface provide user experience comparable to a desktop e-mail application.

Fits Hosting and Telecom requirements

WebMail Pro system architecture is compatible with high availability cluster implementations. The software is optimized to work under heavy loads and to support large numbers of mailboxes.

Works in a cluster! WebMail Pro can be used in cluster environments to maximize performance and system availability. Existing large cluster implementations scale to millions of users.

Natively supports cPanel. It's easy to integrate WebMail Pro into cPanel, you can pick from two options: direct embedding and cPanel add-on (how to).

Collaboration

- Global address book
- Calendar meetings and reminders, sharing and publishing

Synchronization

- Outlook plug-in provides synchronization functionality between the messaging system and Outlook.
- Mobile Sync

Extensive international support

Dozens of international languages are supported, including right-to-left Arabic and Hebrew.

Integration

- Plug it into your environment with integration API
- Natively supports cPanel
- Supports LDAP integration and LDAP-based user authorization.

Customers Say:

"The result has been a huge success and wish to commend your team on such a great product. Well done on a fantastic product!"

Darren Saunders

"Your service on a free product is outstanding! I only wish that my server company had a response rate like yours. Congratulations on a wonderful product."

Wayne Holmes

"What an excellent product, easy to install, works well and looks great."

Dr Frank Rhodes
Touchline Solutions

Clients Portfolio:

Webmail

- Complete support of POP3, IMAP and SMTP protocols
- Supports SSL connections with mail servers
- Mail folders and nested folders including IMAP folders
- Mail search including IMAP search
- IMAP synchronization
- IMAP quotas
- Mail filters
- Multiple domains
- Automated mail check every few minutes
- Autocompletion of e-mail addresses
- Compose e-mails in HTML (WYSIWYG) or plain-text modes
- Spell-check

WebMail Pro is also available as part of AfterLogic MailSuite Pro mailserver solution. In this case, several special features which require mailserver integration are available in WebMail Pro:

- Spam filter with self-learning
- Anti-virus integration
- Auto-responder (vacation message)

Functionality

- **Mobile sync (in PHP version only)**
WebMail Pro supports syncing contacts and calendars with wide variety of mobile devices with use of Funambol which operates via SyncML data exchange standard. For those devices which don't support SyncML natively, mobile sync client may be freely available from Funambol. Contacts/calendars sync is available for BlackBerry, Windows Mobile, Symbian, as well as contacts sync for iPhone and Android.
- **Outlook sync**
WebMail Pro provides synchronization with Microsoft Outlook, that is achieved by setting up Outlook Sync Add-In and configuring it to access your WebMail Pro installation. Once that's done, you can synchronize contacts, groups and calendars between Outlook and WebMail Pro, two-way synchronization is fully supported.
- Keyboard shortcuts
- PDA version

Deployment

- **cPanel integration (in PHP version only)**
WebMail Pro can be integrated with cPanel, you can choose from two options: direct embedding and cPanel add-on. With direct embedding, end-users don't have to install anything, they get ready-to-use WebMail. On the other hand, you can install cPanel add-on from AfterLogic web site into the local repository, with no need to modify cPanel sources, and end-user will be able to create separate WebMail Pro install using his/her own license.
- Web-based installation wizard
- Integration with other web applications (bypass login screen, manage users, etc)
- Source code provided (modification allowed)
